Aleksa Stajić

Software Engineer

Belgrade, Serbia | stajic1210@gmail.com | LinkedIn | GitHub

Software and Data Engineering student with professional experience working on manufacturing execution systems in a regulated environment. Experienced in system configuration, process design, debugging, testing, and validation, alongside personal backend and full-stack projects using Java, Spring Boot, Python, React, and Docker.

EXPERIENCE

ENABL3 - Trainee Functional Consultant, MES **Jun 2026 - Present**

Belgrade, Serbia

- Configure and develop MES workflows and master recipes based on process requirements, including operator interactions, parameters, process logic, and reusable templates.
- Write proprietary MES functions and test and debug workflow logic, configuration, and process behavior.
- Configure and troubleshoot communication between MES workflows and automation systems using OPC Get/Set values and DCS batch signals.
- Designed and tested a reusable cleaning workflow supporting different cleaning modes, machine configurations, operator inputs, and conditional process paths.
- Contribute to requirements and validation documentation and support formal testing activities in a regulated GxP environment.
- Discuss designs, technical limitations, and possible solutions with the project team and client SMEs in an international, English-speaking environment.

PROJECTS

Task Manager - Full Stack | Java, Spring Boot, React, PostgreSQL, Docker

- Built a full-stack task management application with JWT authentication, teams, and task lifecycle management.
- Developed the Spring Boot REST API and React frontend, with Playwright smoke tests and Docker Compose for local development.

Webhook Processor | Python, FastAPI, PostgreSQL, Redis, Docker

- Built a FastAPI service for receiving and processing webhooks with validation, idempotency, routing, and retry handling.
- Used PostgreSQL, Redis, and Docker Compose and documented the project with a reproducible local setup and API examples.

Lite ERP Backend | Java, Spring Boot, PostgreSQL

- Built Spring Boot APIs for products, orders, and inventory using PostgreSQL.
- Modeled stock changes as inventory movements and added transactional checks and integration tests to prevent overselling.

EDUCATION

Singidunum University - B.S. Software and Data Engineering **Expected Dec 2026**

Thesis: Object-Relational Mapping (ORM) - in progress

Relevant coursework: Data Structures & Algorithms, OOP, Databases, Operating Systems, Software Testing, Computer Networks

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C#, TypeScript, SQL
Backend & Web: Spring Boot, Spring Security, JPA/Hibernate, FastAPI, REST, OpenAPI, React, Angular, HTML/CSS
Data: PostgreSQL, MySQL, MongoDB, Redis
Tools & Testing: Git/GitHub, Docker, Docker Compose, Linux, GitHub Actions, Postman, JUnit, Testcontainers, Playwright

ADDITIONAL

Certifications: IBM Academic Initiative - InfoSphere Warehouse (2025); Essentials of Rational Software Architect (2022)
Languages: Serbian - Native · English - Professional working proficiency
